

# 1 year in: on time, on budget

BC Hydro started construction on the Site C project in July 2015. Significant progress has been made and the project is on track for schedule, scope and budget. Key highlights include:

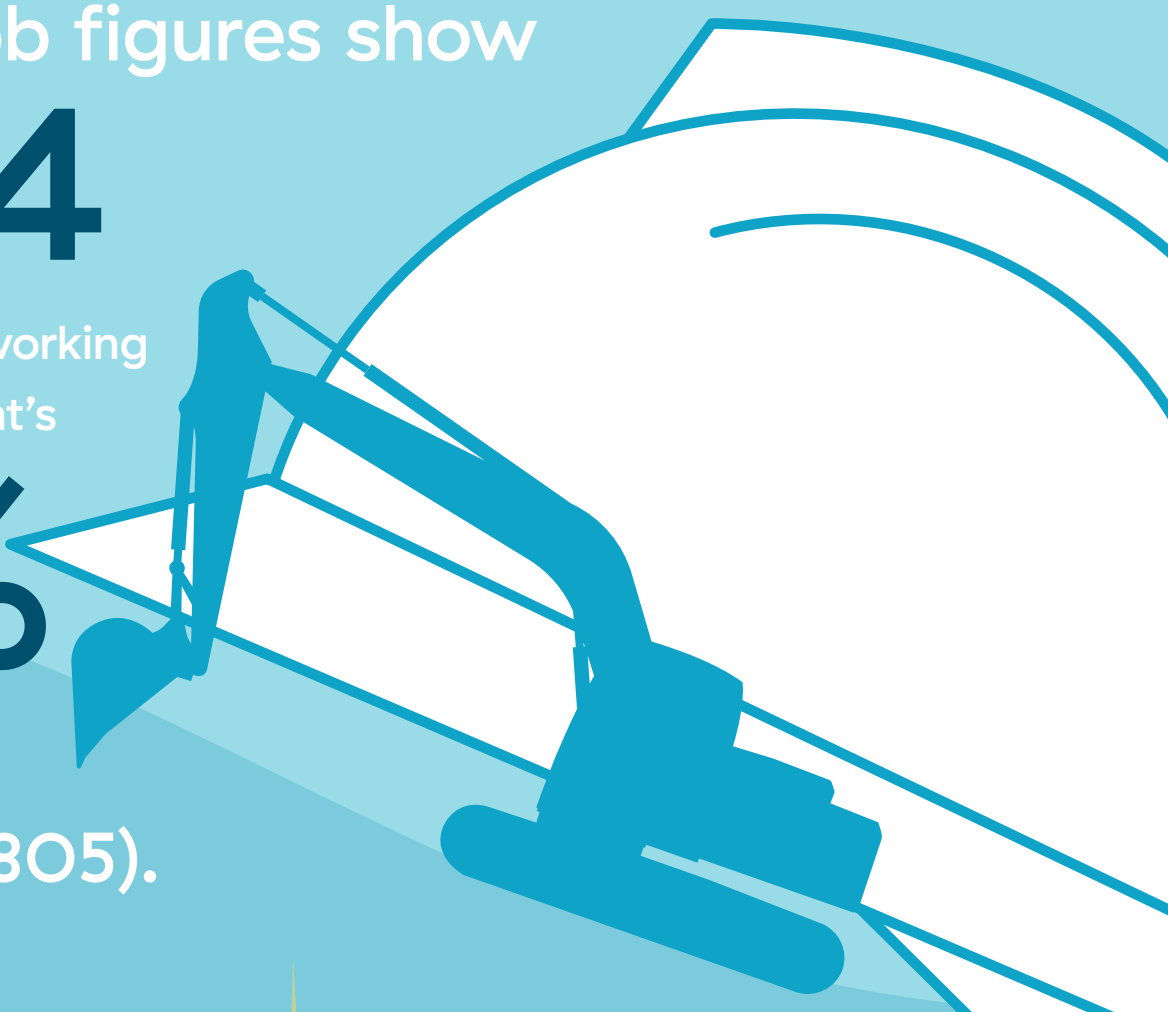

The latest job figures show

## 1,494

British Columbians working on the project — that's

## 83%

of the entire workforce (1,805).

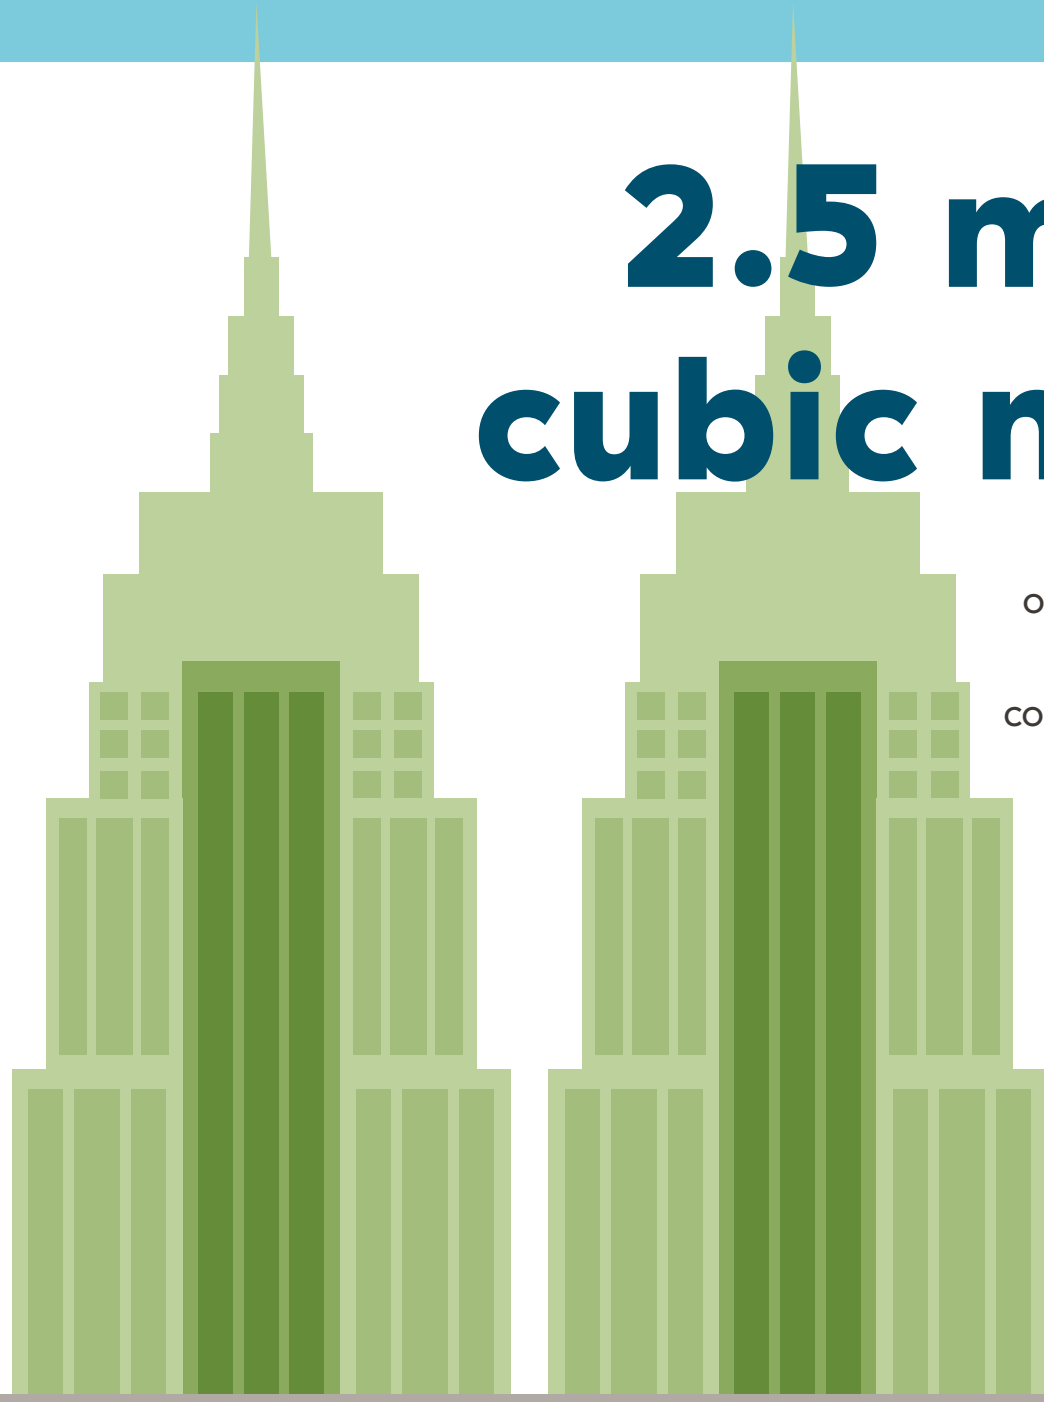

## 2.5 million cubic metres

of material has been excavated from the north bank of the construction site. That's enough material to fill about

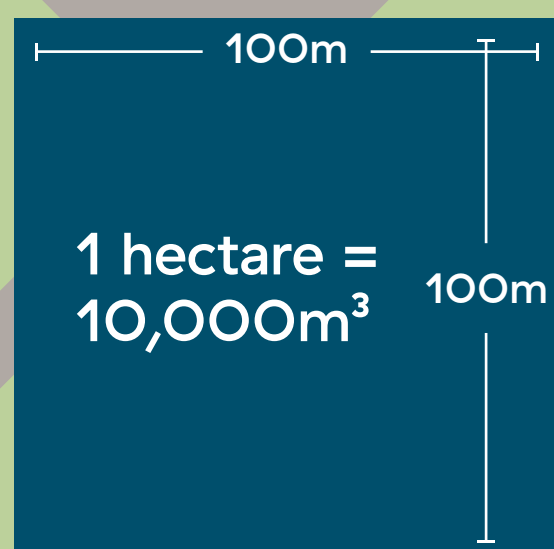

## 2x

the Empire State building.

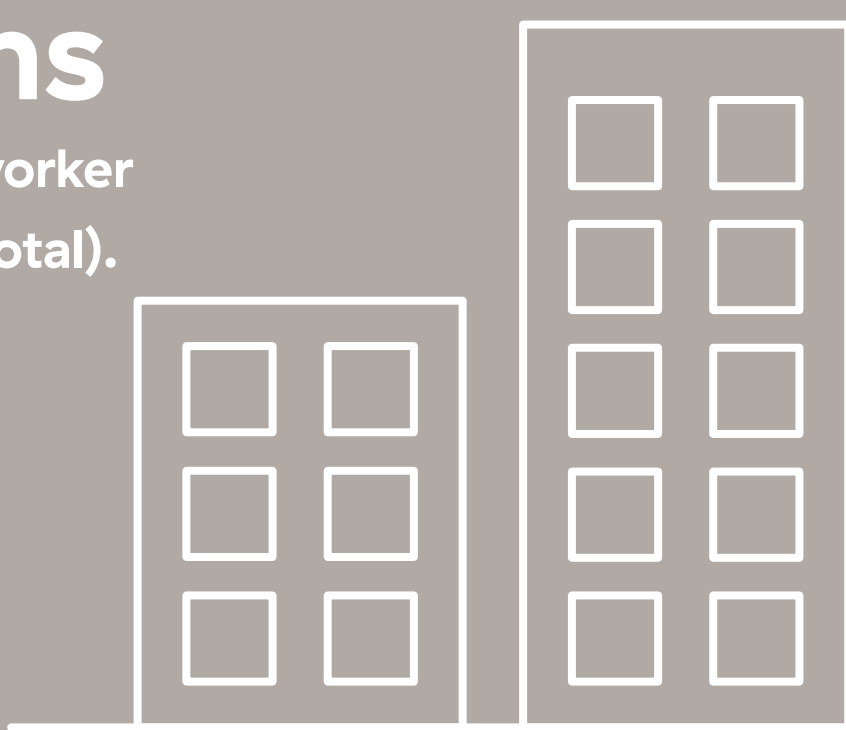

## 900 hectares

of land has been cleared as part of site preparation. That's about **850** baseball fields.

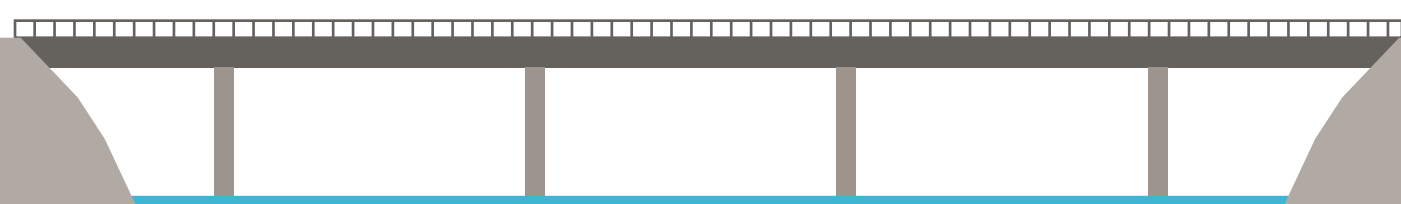

## 1,200 rooms

have opened at the Site C worker lodge (there will be 1,600 total). That's more rooms than the Empress Hotel and Hotel Vancouver combined!

### The 329-metre Temporary Peace River construction bridge has been completed.

If standing upright, this would be the equivalent of an 80-storey building; taller than Vancouver's Shangri-La tower.

Once complete in 2024, Site C will provide clean, renewable and cost-effective electricity for more than 100 years.
