Citation: Mainstream Aquatics Ltd. 2010. Site C fisheries studies – Peace River Fish Inventory. Prepared for BC Hydro Site C Project, Corporate Affairs Report No. 09008AF: 90 p. + plates (Volume 1) and appendices (Volume 2).

TABLE OF CONTENTS

Appendix A – Site Locations

A1: Large fish boat electrofisher site information
A2: Small fish boat electrofisher site information
A3: Backpack electrofisher site information
A4: Beach seine site information
A5: Gill net site information
A6: Minnow trap site information

A1A and A1B: Section 1A site location maps
A2A and A2B: Section 1 site location maps
A3A and A3B: Section 2 site location maps
A4A and A4B: Section 3 site location maps
A5A and A5B: Section 5 site location maps
A6A and A6B: Section 6 site location maps
A7A and A7B: Section 7 site location maps

Appendix B – Definitions

B1: Habitat and substrate type classification system
B2: Site characteristics definitions
B3: Fish data definitions
B4: Fish observed and release-no-data definitions

Appendix C – Sample Effort and Conditions

C1: Large fish boat electrofisher sampling conditions and effort
C2: Small fish boat electrofisher sampling conditions and effort
C3: Backpack electrofisher sampling conditions and effort
C4: Beach seine sampling conditions and effort
C5: Gill net sampling conditions and effort
C6: Gill net sampling conditions and effort

Appendix D – Site Characteristics

D1: Summary of site characteristics data

Appendix E – Catch Rates

Table E1: Fish catch rate data
Figure E1: Lake trout catch rate summary
Figure E2: Lake whitefish catch rate summary
Figure E3: Burbot catch rate summary
Figure E4: Goldeye catch rate summary
Figure E5: Brook stickleback catch rate summary
Figure E6: Finescale dace catch rate summary
Figure E7: Flathead chub catch rate summary
Figure E8: Peamouth catch rate summary
Figure E9: Pearl dace catch rate summary

Figure E10: Northern redbelly dace catch rate summary
Figure E11: Lake chub catch rate summary
Figure E12: Longnose dace catch rate summary
Figure E13: Northern pikeminnow catch rate summary
Figure E14: Trout-perch catch rate summary
Figure E15: Spottail shiner catch rate summary
Figure E16: Spoonhead sculpin catch rate summary

Appendix F – Biological Characteristics

F1: Biological characteristics data for sampled fish

Appendix G – Young Fish Distribution

G1: Young fish numbers recorded by site

APPENDICES

This page is intentionally blank.

APPENDIX A
Site and Sample Data

This page is intentionally blank.

Appendix A Table A1. Large fish boat electrofisher site information (Nad 83, Zone 10), Site C Peace River Fish Inventory 2009.

APPENDIX B
Definitions

This page is intentionally blank.

Appendix – B1

Habitat and Substrate Type Classification System

Instream Habitat

Provides a qualitative assessment of the physical characteristics of a stream and its potential as fish habitat.

Riffle - Portion of channel with increased velocity relative to Run and Pool habitat types; broken water surface due to effects of submerged or exposed bed materials; shallow (less than 25 cm). Limited value as habitat for larger juveniles and adults (i.e., feeding), but may be used extensively by young-of-the-year and small juveniles.

RF - Typical riffle habitat type; provides limited cover for all life stages.

RF/BG - Riffle habitat type with abundance of large cobble and boulder substrates. Limited cover for juveniles and adults; but, may be used extensively by young-of-the-year fish.

Rapids (RA) - Portion of channel with highest velocity relative to other habitat types. Deep (>25 cm); often formed by channel constriction. Substrate extremely coarse; dominated by large cobble and boulder substrates. Habitat provided for juveniles and adults in pocket eddies associated with substrate.

Run - Portion of channel characterized by moderate to high current velocity relative to Pool and Flat habitats; water surface largely unbroken. Potentially high habitat value for all life stages. Can be differentiated into five types based on depth and cover.

R1 - Maximum depth exceeding 1.5 m; average depth 1.0 m. High cover at all flow conditions. Highest quality habitat for larger juveniles and adults; limited value for young-of-the-year-fish.

R2/BG - Maximum depth reaching 1.0 m and generally exceeding 0.75 m; presence of large cobble or boulder substrates in channel. High cover at all flows. Moderate to high quality habitat for larger juveniles and adults.

R2 - Maximum depth reaching 1.0 m and generally exceeding 0.75 m. High cover during most flows, but not during base flows. Moderate quality habitat for juveniles and adults; limited value for young-of-the-year-fish.

R3/BG - Maximum depth of 0.75 m, but averaging <0.50 m; presence of large cobble or boulder substrates in channel. Moderate cover at all flows. Moderate quality habitat for juveniles and adults; but, the value to young-of-the-year-fish is potentially high.

R3 - Maximum depth of 0.75 m, but averaging <0.50 m. Low cover at all flows. Lowest quality habitat for juveniles and adults; but, the value to young-of-the-year-fish is potentially high.

Flat - Area of channel characterized by low current velocities (relative to RF and Run cover types); near-laminar (i.e., non-turbulent) flow. Depositional area dominated sand/silt substrates. Differentiated from Pool habitat type by high channel uniformity and lack of direct association with riffle/run complex. Potential habitat value for all life stages is moderate to high. Can be differentiated into five types based on depth and cover.

F1 - Maximum depth exceeding 1.5 m; average depth 1.0 m or greater. High cover at all flows. Highest quality habitat for larger juveniles and adults; limited value for young-of-the-year-fish.

F2/BG - Maximum depth reaching 1.0 m and generally exceeding 0.75 m; presence of large cobble or boulder substrates in channel. High cover at all flows. Moderate to high quality habitat for larger juveniles and adults.

F2 - Maximum depth exceeding 1.0 m; generally exceeding 0.75 m. High cover during most flows, but not during base flows. Moderate quality habitat for juveniles and adults; limited value for young-of-the-year-fish.

F3/BG - Maximum depth of 0.75 m, but averaging <0.50 m; presence of large cobble or boulder substrates in channel. Moderate cover at all flows. Moderate quality habitat for juveniles and adults; but, the value to young-of-the-year-fish is potentially high.

F3 - Maximum depth of 0.75 m, averaging less than 0.50 m. Low cover at all flows. Lowest quality habitat for juveniles and adults; but, the value to young-of-the-year-fish is potentially high.

Pool - Discrete portion of channel featuring increased depth and reduced velocity (downstream oriented) relative to Riffle and Run habitat types. Normally featuring Riffle/Run associations. Principal habitat value for all life stages is cover. When in close association with Riffle/Run habitats, value can be very high. Can be differentiated into three types based on depth.

P1 - Maximum depth exceeding 1.5 m; average depth 1.0 m or greater; high cover at all flow conditions. Often intergrades with deep-slow type of R1. Highest quality habitat for larger juveniles and adults; limited value for young-of-the-year-fish.

P2 - Maximum depth reaching or exceeding 1.0 m, generally exceeding 0.75 m. High cover at all but base flows. Moderate quality habitat for juveniles and adults; limited value for young-of-the-year-fish.

P3 - Maximum depth of 0.75 m, averaging <0.50 m. Low instream cover; includes small pocket eddies. Lowest quality habitat for all life stages.

Special Features - Includes the following instream features:

Ledges (LG) - Areas of bedrock intrusion into the channel; often creates Chutes and Pool habitat.

Falls (FAL) - Channel section exhibiting distinct vertical falls over boulder and bedrock. Often a barrier to fish.

Cascade (CAS) - Area of channel exhibiting distinct drop over boulder and bedrock, but, no defined falls. Often a barrier to fish.

Tributary Confluence (TC) - Area of main river channel directly affected by tributary confluence.

Backwater (BW) - Well-defined zone of zero or reverse flow water velocity associated with a large bank irregularity.

Tributary Confluence/Backwater (TCBW) – area of main channel and backwater associated with bank irregularities formed by tributary confluence.

Snye (SN) - Well-defined back channel not subjected to mainstem currents.

Oxbow (OX) – Bend or meander in a stream or river that becomes detached from the stream channel from natural fluvial processes.

Bank Habitat

The zone within the immediate hydraulic influence of the bank-water interface. Typically extends from the annual high-water to low-water mark.

Armoured

Bank is stable and is composed of armoured cobble to boulder substrates that are not subjected to movement during annual floods; can be differentiated into categories based on the amount of bank roughness. (A1 very rough, A2 moderately rough, A3 not rough)

Canyon

Bank is stable, is near vertical, and is composed of boulder to bedrock substrates; can be differentiated into categories based on the amount of bank roughness (C1 very rough, C2 moderately rough, C3 not rough).

Depositional

Bank exhibits low relief and is composed of silt to cobble substrates; characterized by high substrate mobility and low bank roughness (D1 cobble; D2 gravel; D3 sand and silts). Differentiated into tributary (TD) and mainstem (MD) depositional zones.

Erosional

Bank is dominated silt to gravel substrates that exhibit evidence of active erosion; note that large rock substrates can be present; can be differentiated into categories based on the amount of bank roughness (E1 very rough, E2 moderately rough, E3 not rough).

Mesohabitat

To address issues caused by sampling several habitat types within on site using small fish and large fish boat electrofisher methods , sampled instream and bank habitat types were categorized into discrete groups based on differences in physical characteristics that included bank slope, water velocity, and the presence of physical cover (see table).

Four mesohabitat types sampled during the program were as follows:

- SFC - Moderate slope; shallow water; high water; velocity; physical cover
- SFN - Gradual slope; shallow water; high water velocity; no physical cover
- SSC - Moderate slope; shallow water; slow; physical cover
- SSN - Gradual slope; shallow water; slow; no physical cover

MesoHabitat Category	Bank Habitat ^a	Instream Habitat	Water Velocity ^a	Channel Bed Slope ^a	Physical Instream Cover	Substrate
SFN	A3	Run	Moderate to High	Low	Absent	Rock
SFC	A1/A2	Run	Moderate to High	Moderate	Present	Rock
SSN	A3	Flat	Low	Low	Absent	Rock or Sand
SSC	A1/A2	Flat	Low	Moderate	Present	Rock or Sand

^a Based on subjective measure by field biologist.

Substrate Classification System

Modified Wentworth classification for substrate particle sizes (from Cummins 1962)

Category	Particle Size Range (mm)
Bedrock	-
Boulder	>256
Cobble	32 - 256
Gravel	1 - 32
Sand	0.0625 - 0.2-1
Silt	0.0039-0.0625
Clay	<0.0039
Organics	-

Appendix – B2 Definitions

Habitat type:	See Appendix B1 for definitions.
Water conductivity:	Measured using Hanna HI98311 EC/TDS meter ($\mu\text{S}/\text{cm}$) ($\pm 2\%$ full scale).
Water temperature:	Measured using Hanna HI98311 EC/TDS meter ($\pm 0.1^\circ\text{C}$).
Water pH:	Measured using Hanna HI98311 EC/TDS meter (± 0.01).
Water clarity:	Measured to the nearest centimetre using a secchi plate mounted on a pole (plate was 2.5 cm wide x 21 cm long partitioned into three equal sections of black, white, and black).
Sample effort:	Dependent on sample method. Boat electrofishing measured as number of fish/km, backpack electrofishing effort measured as number of fish/m, beach seine effort measured as number fish/100 m ² , gill net effort measured as number fish/100 m ² /24 h, and minnow trap effort measured as number of fish/trap/24 h.
Substrate type (%):	Material forming the bottom of the stream bed (see Substrate Classification System, Appendix B1). Visually rated within a predetermined area of stream bed.
Fish Cover (%):	Overhead (Ovh) cover, rock cover, large organic debris (LOD) cover, submergent (Sub) vegetation cover, emergent (Emer) vegetation cover, algal cover, that provide protection for fish within a predetermined area.
D90 (cm):	Represented the average size of substrate particle that is in the 90 th percentile.
Embeddedness:	Degree to which rock substrates are surrounded and/or are covered by fines (Low, Moderate, High).
Compaction:	Looseness of substrate; ability to be moved during high flow (Low, Moderate, High).
Depth (m):	Depth of water at a point measured to nearest centimetre. At beach seines sites depth is measured at $\frac{1}{4}$, $\frac{1}{2}$, and $\frac{3}{4}$ of the haul width. Depth at electrofisher sites depth is measured in the same manner across the width of sampled area.
Velocity (m/s):	Measured in the same place depth is taken at beach seine and backpack electrofisher sites. Measured with Swiffer Model 2100 flow meter wading wand (wand automatically determines depth at 0.6 m from water surface – best place to determine average velocity of water column in relatively shallow water) (m/s every 6.0 seconds).

Sex and Maturity Descriptions

M	F	Class	Description
99		Immature A	Sex indeterminable due to small gonad size.
01	11	Immature B	Small gonad size; fish has never spawned and will not spawn during the coming spawning season.
02	12		Maturing but not ready to spawn; will spawn this year
06	16	Alternate	Small gonad size associated with large size; suggests alternate year spawner.
07	17	Gravid	Sexual organs fill cavity testes white, drops of milt fall with pressure; eggs completely round, some already translucent.
08	18	Ripe	Roe or milt are extruded by slight pressure on the belly.
09	19	Spent	Spawning completed; resorbtion of residual ovarian tissue is not yet complete.
10	20	External	Sex determined by external characteristics
	97	Adult	Based on fish size; sex not determined.
	98	Juvenile	Based on fish size; sex not determined.

MINN	Cyprinidae

Appendix – B4
Observed and Release-No-Data (RND)
Definitions

Small Fish Catch:	Count of small fish (≤ 200 mm fork length) caught and measured.
Total Catch:	Total count of fish caught and measured.
Adult Observed:	Adult fish (> 200 mm fork length) observed, but not caught.
Small Fish Observed:	Small fish observed, but not caught.
YOY Observed:	YOY (young-of-the-year) observed, but not caught.
All RND:	All age groups caught with (RND, released-no-data) no measurements taken.
Adult RND:	Adult fish caught with no measurements taken.
Small Fish RND:	Small fish caught with no measurements taken.
YOY RND:	YOY fish caught with no measurements taken.
Small Fish Number:	Count of small fish catch, small fish observed, YOY observed, small fish RND, and YOY RND.
Total Number:	Total count of all caught, observed and RND fish.

APPENDIX E
Catch Data

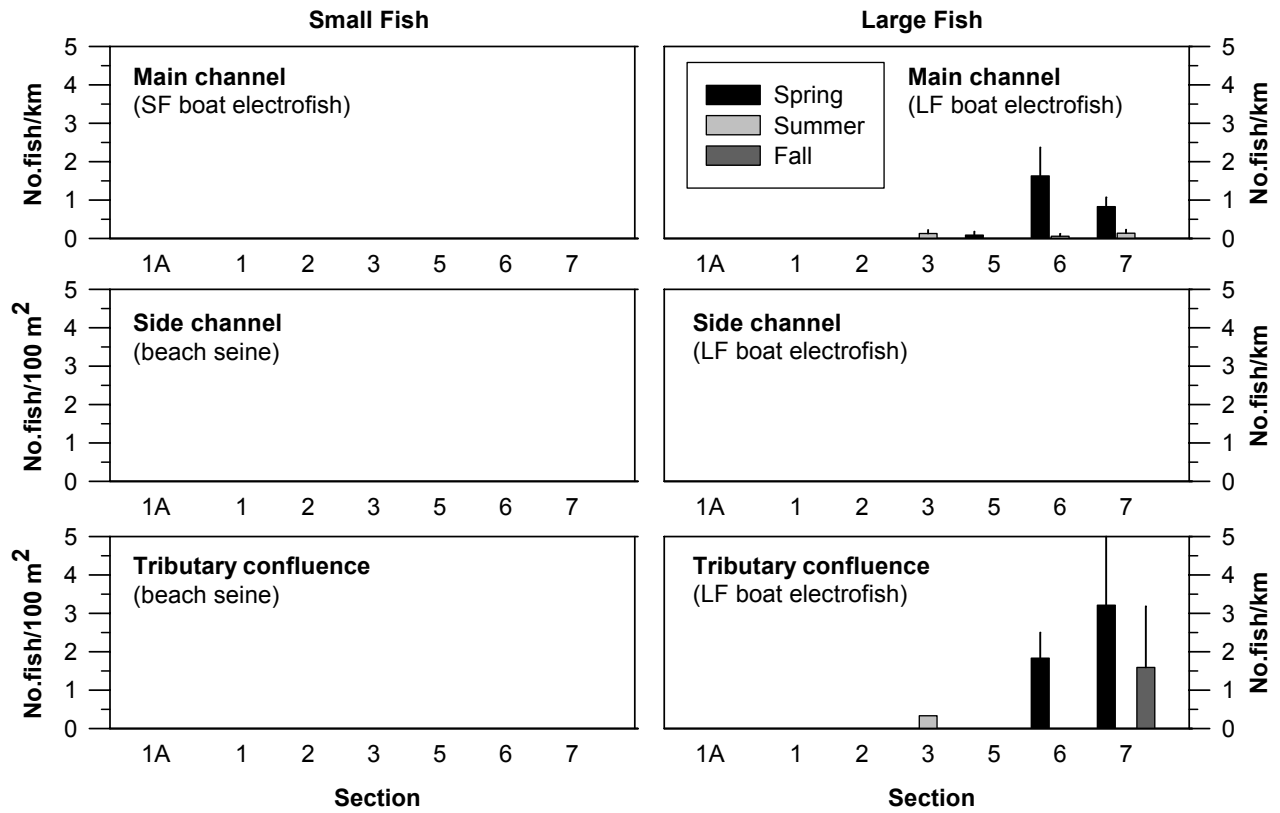

This page is intentionally blank.

Appendix E Figure E1 Average catch rates (\pm SE) of lake trout in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

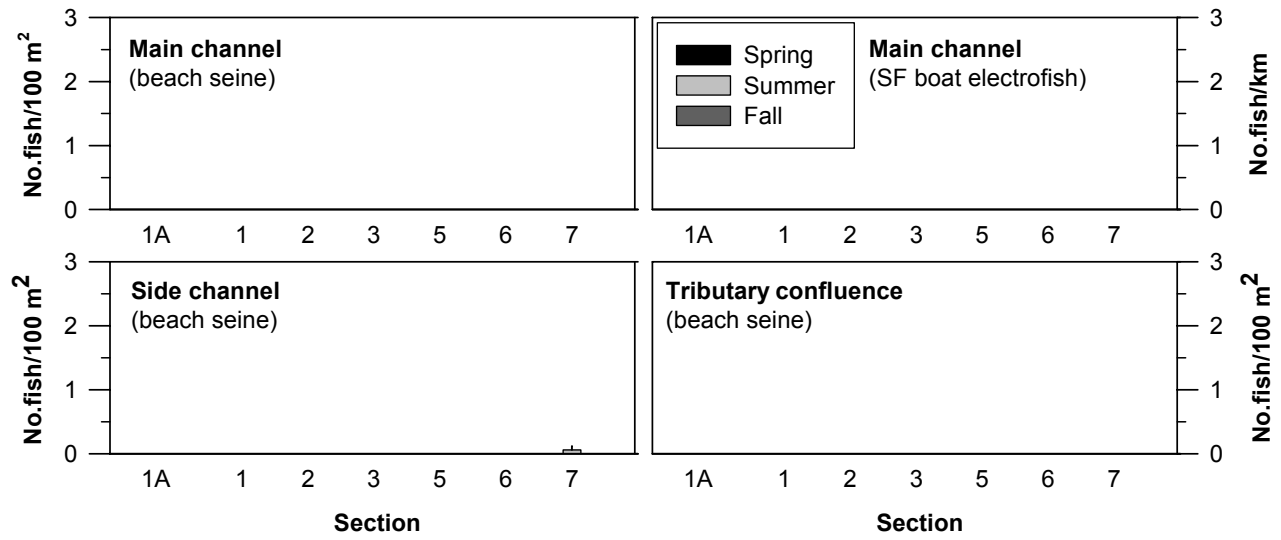

Appendix E Figure E2 Average catch rates (\pm SE) of lake whitefish in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

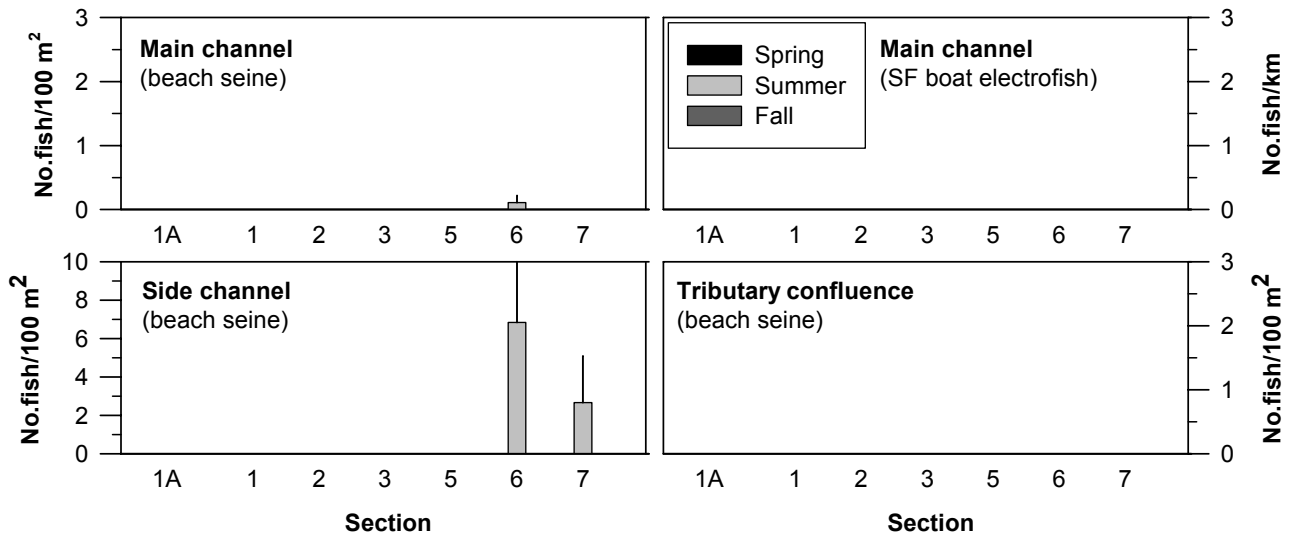

Appendix E Figure E3 Average catch rates (\pm SE) of burbot in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

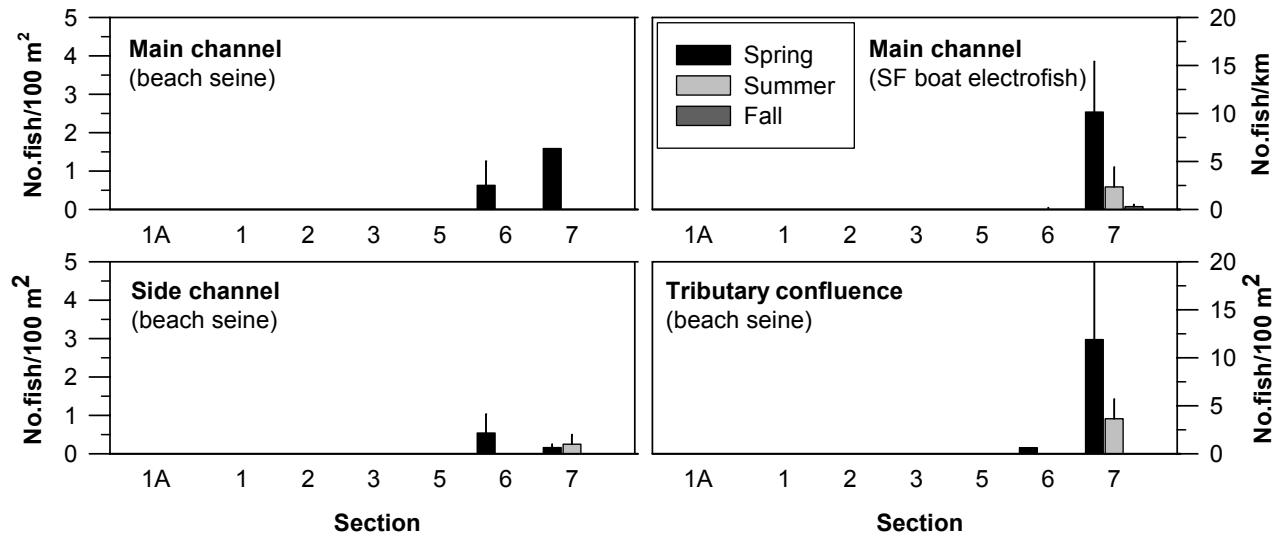

Appendix E Figure E4 Average catch rates (\pm SE) of goldeye in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

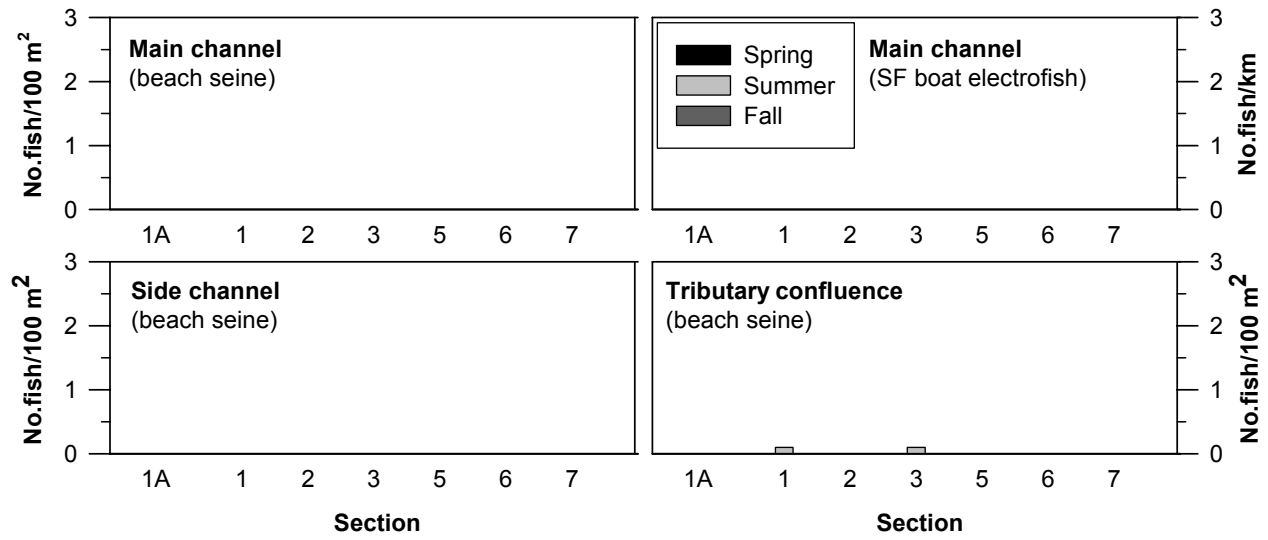

Appendix E Figure E5 Average catch rates (\pm SE) of brook stickleback in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

Appendix E Figure E6 Average catch rates (\pm SE) of finescale dace in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

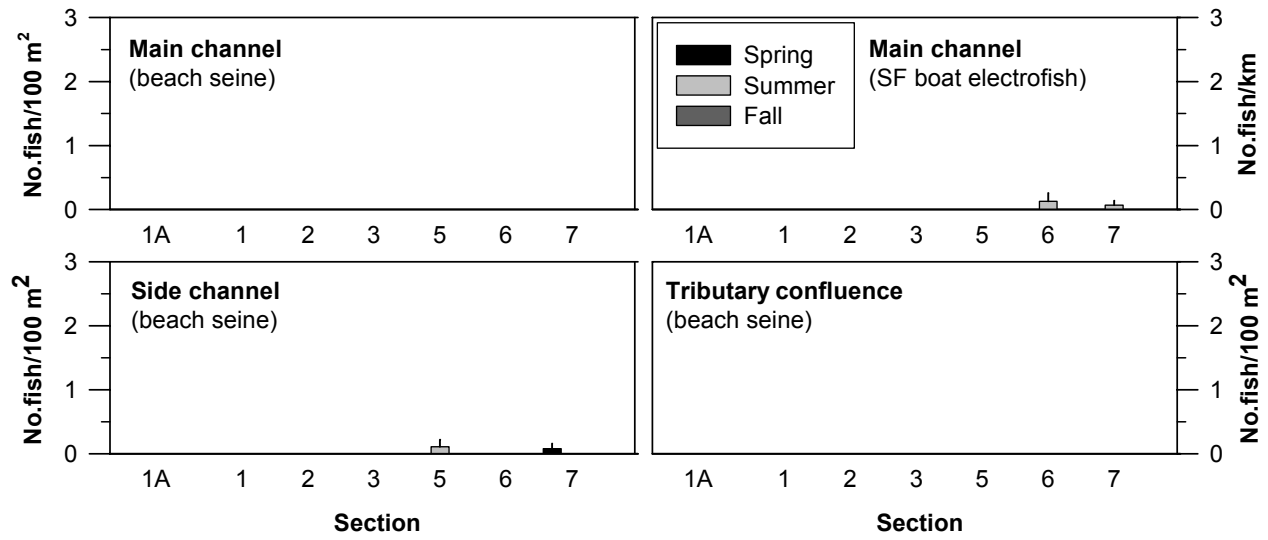

Appendix E Figure E7 Average catch rates (\pm SE) of flathead chub in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

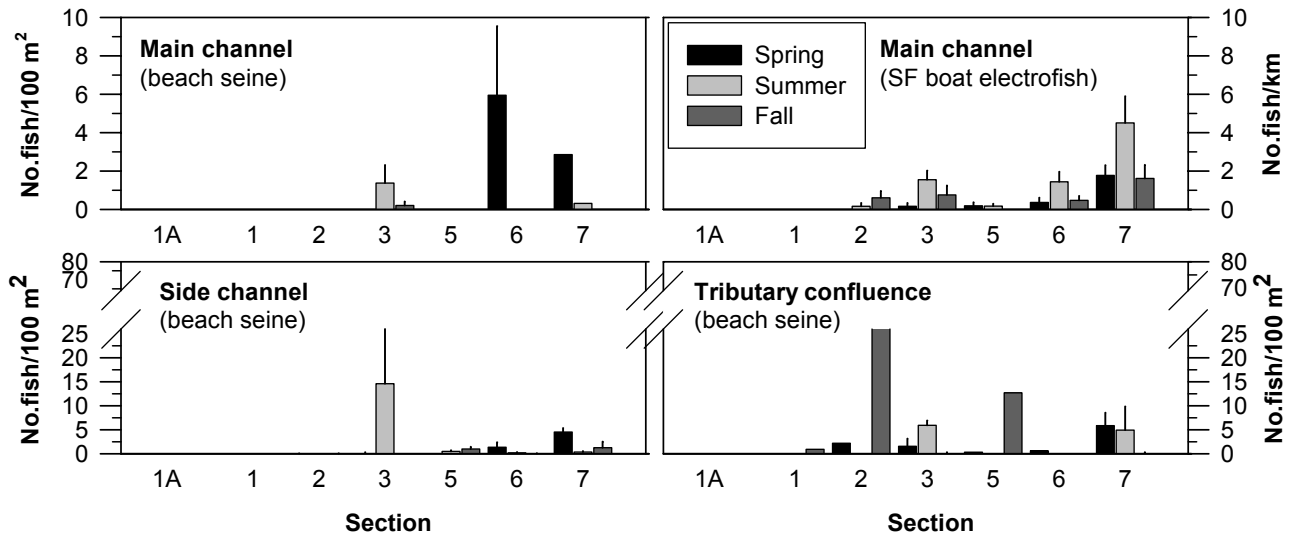

Appendix E Figure E8 Average catch rates (\pm SE) of peamouth in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

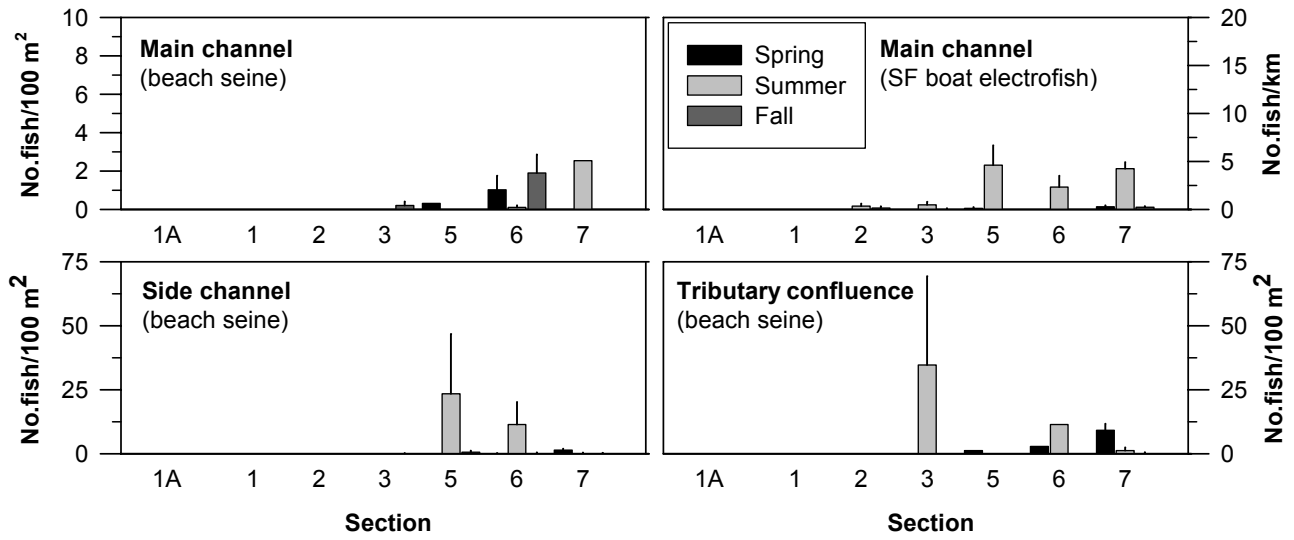

Appendix E Figure E9 Average catch rates (\pm SE) of pearl dace in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

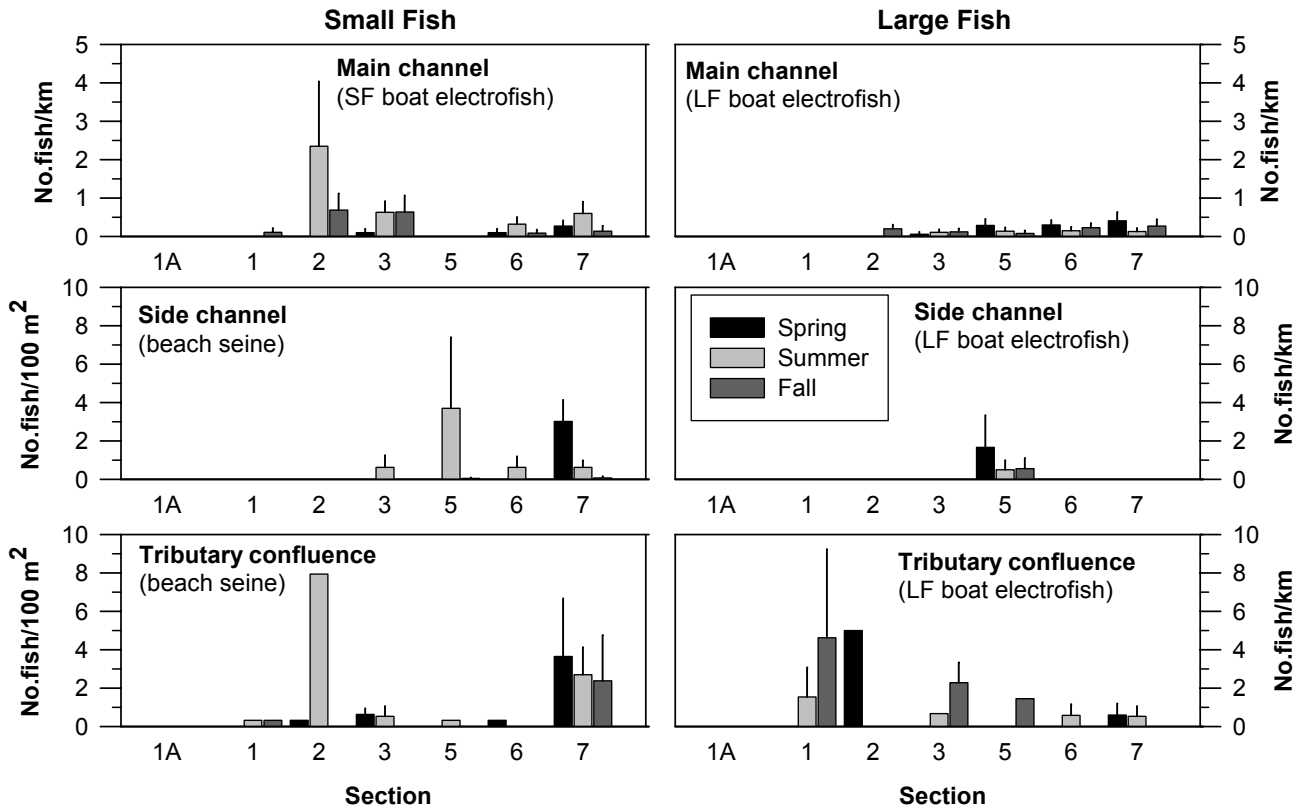

Appendix E Figure E10 Average catch rates (\pm SE) of northern redbelly dace in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

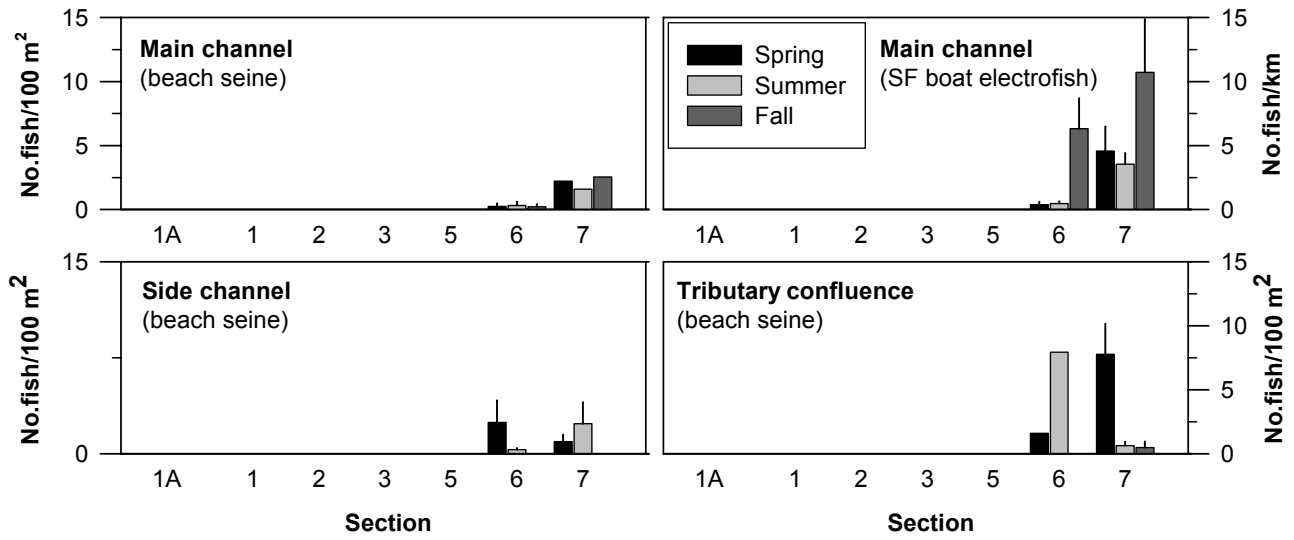

Appendix E Figure E11 Average catch rates (\pm SE) of lake chub in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

Appendix E Figure E12 Average catch rates (\pm SE) of longnose dace in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

Appendix E Figure E13 Average catch rates (\pm SE) of northern pikeminnow in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

Appendix E Figure E14 Average catch rates (\pm SE) of trout-perch in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

Appendix E Figure E15 Average catch rates (\pm SE) of spottail shiner in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

Appendix E Figure E16 Average catch rates (\pm SE) of spoonhead sculpin in study sections during spring, summer, and fall, Site C Peace River Fish Inventory 2009 (small fish \leq 200 mm fork length and large fish $>$ 200 mm fork length; SF - small fish method, LF - large fish method).

Appendix E Table E1. Fish catch rate data, Site C Peace River Fish Inventory 2009.
