Subject: BC Hydro Site C - Calcium Chloride Application
Date: 2022, September 06 3:57:52 PM

Hello Old Fort residents,

We want to update you that we have again applied calcium chloride to the construction site roads in our ongoing efforts to minimize the dust coming from site. The calcium works for several weeks to form a cap on the road and the latest application was just this past Sunday, September 4. We continue to water site construction roads frequently. We also swept the road at Gate B over the weekend as well.

Kind regards,
Site C Project team
