Meeting Summary:
Hudson’s Hope Open House

Site C Clean Energy Project

June 12, 2019
Introduction

The purpose of this document is to briefly summarize the Site C community open house held on June 12, 2019 in the District of Hudson’s Hope.

The objectives of the meeting were to:

- Share information with community members about the design of the Hudson’s Hope shoreline protection berm and the recreation site.
- Provide an update on Highway 29 realignment and general Site C project update.
- Outline the timeline for berm and recreation site construction, share information on any anticipated impacts (noise, air quality and traffic) and BC Hydro’s planned mitigation strategies.

Meeting format

The open house was a drop-in event held in the evening at the Hudson’s Hope community hall.

Participants were invited to review display boards and encouraged to engage with project staff. 18 staff were available to answer questions, with expertise in property agreements, environment, community mitigations, engineering, reservoir clearing, Highway 29 construction, and shoreline protection construction.

Approximately 160 residents attended the event. Although written and online feedback forms were provided, participants chose to provide their comments verbally.

Notification

Notification of the event was provided in the following ways:

- An invitation was mailed to every resident and business in the community two weeks prior to the event.
- An ad was placed in the June issue of the Hudson’s Hope Bulletin.
- Posters were placed at the District Office, post office, and bulletin boards at Legacy Grocery Store, Marg’s Mini-Mart, and the hardware store.
Summary of comments

Project staff took notes of the types of questions and comments they received. Comments were received on the following themes:

Boat launches
- Traffic flow:
  - Many residents appreciated the traffic flow design of the access and exit. Comments included “should be easy to follow even without any signs” and “looks like a great layout to help get boats in the water”.
  - One person asked if a concrete divider would be installed to separate the two lanes. Staff explained that this was not a consideration after the conceptual design review and stakeholder meeting.
- Ramp:
  - Most people appreciated the double-wide ramp. There were some questions on traffic flow specific to the ramp use. They were advised that signage will be in place to guide ramp use.
- Some residents noted that the vegetation was not as thick as represented in the renderings.
- Two residents asked about overnight use. Staff explained that overnight use of the area would not be permitted.
- One resident asked about foot trails to the water. Staff explained that the vegetation is not as thick as shown in the rendering and it is likely that access would be possible. Further, they explained that a formal trail is not in the plan for this site at this time.
- Parking:
  - Many people appreciated the size of the parking area, indicating is will be more than sufficient for those busy long weekends. They also indicated that two or three picnic tables is more than enough for this location.
  - One person asked about paving the parking area. Staff explained that it is not in the plan at this time.

Shoreline protection
- Many people asked about fishing off the edge of the berm.
- There was concern amongst some property owners in Zone A who had heard that the creation of the berm involved cutting into the slope. They were relieved to see the display boards show that this was only the case for Zone B.
- Several Zone A property owners asked about building docks or mooring posts for personal watercrafts once the river becomes a reservoir.
- One person asked about fire response along the berm crest. Staff advised that emergency services would have access for vehicles.

D. A. Thomas day use area
- Residents seemed satisfied with the car-topper launch since the Lynx Creek boat launch will be just down the highway.
- Many people appreciated the pedestrian access going east from the recreation site along the top of the berm. They also said they would like to have pedestrian access going the other way as well, but were generally understanding that there were privacy concerns from property owners in that area.
- Many people said that they wanted a more open area at the day use site to provide more usable space. A few people noted that vegetation took up space and reduced what was usable for events and picnics.
- One person commented that BC Hydro should provide another trail while the Portage Trail was closed due to construction.
• One person asked whether the road and day use area would be open in winter. Staff advised that it would be open for pedestrians but not vehicles.

D. A. Thomas Road
• Many residents supported the fact that D. A. Thomas Road would now have two lanes.
• Many people were confused by the reference to D. A. Thomas Road, and preferred to call it the Old Ferry Landing.
• A few people asked about slope stability above the day use area and D. A. Thomas Road.

Highway 29
• Many people asked for more information about the highway realignment sections and their locations.
• Residents were also quite interested in the Highway 29 construction upgrades and would have liked more visuals/information in that regard.

Clearing
• One person asked if a pile of mulch or grinding material could be stock piled for public use.

Traffic
• One person was concerned about the speed of logging trucks driving along the highway and wanted to know if the trucks need to have GPS installed to monitor speed.

Inundation
• One person was concerned about the impacts that inundation will have on hunting and fishing opportunities.
Letter of Invitation

May 20, 2019

Dear Hudson’s Hope resident:

Re: Community open house on Site C construction activities in Hudson’s Hope

You are invited to an open house on construction activities in Hudson’s Hope as part of the Site C project.

The purpose of the event is to provide an update on shoreline protection, Highway 29, reservoir clearing, the Lynx Creek boat launch as well as the community benefits and mitigations of the Site C project.

During this event, you will have an opportunity to review information boards and meet technical staff. The drop-in event will take place on:

Date: Wednesday, June 12, 2019
Time: 5 pm to 8 pm
Location: Hudson’s Hope Community Hall
10310 Kyllo Street

We hope you will be able to attend.

Please contact us at 1(877) 217-0777 or sitec@bchydro.com if you have any questions.

Sincerely,

Site C Project Team
Notice of Community Open House

Residents of Hudson’s Hope are invited to a drop-in open house on the Site C project.

The purpose of the event is to provide an update on shoreline protection, Highway 29, reservoir clearing, the Lynx Creek boat launch, as well as the community benefits and mitigations of the Site C project.

You will have the opportunity to review information boards and speak to technical staff.

When: Wednesday June 12, 2019 (drop-in format)
      5 pm – 8 pm

Where: Hudson’s Hope Community Hall
       10310 Kyllo St, Hudson’s Hope

Contact us for more information:
• sitec@bchydro.com
• 1.877.217.0777
• sitecproject.com
Feedback Form

Hudson’s Hope Community Event – June 12 2019

Thank you for your interest in the projects in Hudson’s Hope related to the construction of the Site C dam. After you have reviewed the display boards, please provide input on the following questions.

1. Review the board on the D.A. Thomas recreation area. How would you like the area to be laid out for vegetation and picnic areas?

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

2. What is the most useful way of notifying you about the project?

☐ Email ☐ Hudson’s Hope bulletin ☐ Twitter

☐ Website: sitesproject.com or drivebc.com ☐ Highway signs

☐ Other: ________________________________________________________________

3. Please provide your email if you would like to receive regular updates on the construction of Site C and activities that may impact your community.

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

4. Please provide any other comments or feedback.

________________________________________________________________________

________________________________________________________________________

________________________________________________________________________

Display boards
Welcome

One of the objectives of the Site C project is to provide lasting economic and social benefits for neighbouring communities. In 2016, we worked with the District of Hudson’s Hope to develop a long-term partnering agreement to support a sustainable and thriving community. We continue to meet regularly to build upon this relationship.

As part of the Site C project, we committed to mitigating the effects of the dam and reservoir on the community’s infrastructure by building a new berm for shoreline protection and by replacing the District’s water intake and pump house.

We also developed a community benefit agreement with the District of Hudson’s Hope to provide $3.5 million in programs and funding to:

- Revitalize a residential subdivision to provide housing options and improve employee attraction and retention
- Build a demonstration home to attract and retain essential community service professionals
- Create and improve recreational infrastructure
- Provide funding for a range of community programs and activities

The purpose of today’s open house is to provide an update on construction activities and the community benefits and mitigations for the Site C project.
Site C is the third dam on the Peace River and, once complete, will be one of the many hydroelectric dams that BC Hydro owns and operates throughout the province. The project received approval after a rigorous three-year environmental assessment by the provincial and federal government, with an independent joint review panel. Construction started in July 2015 and the first unit will be in service in 2024.

The Site C project builds on BC Hydro's existing system. Because it uses water already in the Williston Reservoir, Site C will generate 35% of the electricity of the WAC Bennett Dam, using a reservoir only 5% of the size. Once it is built, the Site C generating station will produce 5,100 gigawatt hours of clean electricity every year, enough to power 450,000 homes in B.C.
Building the Site C Clean Energy Project

Roads & highways
- Upgrades to 240, 269, 271 and Old Fort Roads
- Realignment of six segments of Highway 29

Hudson’s Hope shoreline protection
- Upgrades to DA Thomas Road
- Construction of a berm along the shoreline
- Re-paving of Clarke Ave, if required

Peace River / Reservoir area
- Public safety signs and beacons installed upstream and downstream of the dam site
- Clearing activities, river diversion and reservoir filling

Production & transport of materials
- Materials for Site C from Portage Mountain Quarry, West Pine Quarry and Wuthrich Quarry
- Transportation of materials by conveyor/truck from 85th Avenue to dam site

Dam site area
- Site-preparation activities: clearing trees and vegetation, building access roads, constructing a temporary bridge, worker lodge and viewpoint and on-site excavations
- Construction activities: cofferdams and diversion tunnels, RCC buttress, earthfill dam, generating station, spillways and substation

Transmission works
- Clearing activities along the 75 km transmission line corridor
- Construction of two new 500kV transmission lines
- Extension of Peace Canyon switchyard

Kilometres

- Hudson’s Hope
- Williston Reservoir
- W.A.C. Bennett Dam
- Portage Mountain Quarry
- Peace Canyon Dam
- Hudson’s Hope Berm
- Transmission Line Corridor
- Pine River
- Moberly River
- Reservoir area
- Dam site area
- Fort St. John
- Taylor
- Farrell Creek
- Lync Creek
- Dry Creek
- Moberly Lake
- West Pine Quarry
- West Moberly IR
- Saulteau IR
- Dawson Creek
- Chetwynd
- Peace Canyon Dam
- Cache Creek
- Cache Creek/Bear Flat
- Halfway River
- Farrell Creek
- Farrell Creek East
- 85th Avenue Industrial lands
- Hudson’s Hope Berm
- West Moberly IR
- Wood Reserve (75 km SW)
The Site C project will create a new reservoir, which will result in changes to the shoreline at Hudson's Hope. Shoreline erosion, combined with changes in groundwater conditions, could cause the banks to recede in the lower slopes below the community.

To protect against this, we are building 2.5 kilometres of shoreline protection. This will consist of a berm, a large earth-and-rock-filled barrier. It will also consist of slope flattening, where we remove the unstable top layers of soil.

It's important to note that while the berm will protect the shoreline from instability caused by the new reservoir, it cannot address pre-existing conditions in the upper slopes.

Shoreline protection will begin at the western end of Hudson's Hope, and extend downstream past the municipal sewage treatment facility. The typical height of the berm will be approximately 20 metres lower than the top of the slope, in most areas.
## Types of shoreline protection

<table>
<thead>
<tr>
<th>Location</th>
<th>Type of shoreline protection</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Zone A:</strong> Below the residential area and extends just downstream of the hotel on Clarke Ave</td>
<td>1,650 metre berm</td>
</tr>
<tr>
<td><strong>Zone B:</strong> Below the light industrial land</td>
<td>550 metre slope flattening and armoring of the shoreline</td>
</tr>
<tr>
<td><strong>Zone C:</strong> Below the municipal sewage treatment lagoons</td>
<td>450 metre berm</td>
</tr>
</tbody>
</table>

### Location Notes:
- **Datum:** NAD83
- **Projection:** UTM Zone 10N
- **Base Data:** Province of B.C.
- **Imagery:** ESRI Online Basemapping.

---

The construction of the Site C Clean Energy Project is subject to required regulatory and permitting approvals.

---

**Legend**
- Hudson’s Hope Shoreline Protection Area
- Boat Launch
- Recreation Area
- Portage Trail
- DA Thomas Road
- Proposed pedestrian access
Cross-section for Zone A and Zone C

- Top of slope (485m)
- Current river level (453m)
- New reservoir level (461m)
- Top of berm (464m)

Materials:
- General berm fill
- Gravel fill and cobble rock
- Granular drain
- Drainage ditch
- Riprap (includes fish habitat)
- Existing slope remains unchanged

*Measurements are approximate
Cross-section for Zone B

- Top of slope (485m)
- Current river level (453m)
- New reservoir level (461m)
- Top of berm (464m)

Materials to be removed in slope flattening

Existing slope is excavated and stabilized

Riprap (includes fish habitat)

Drainage ditch

Bedrock

*Measurements are approximate
We will be building shoreline protection from 2020 to 2022. During this time, construction vehicles will enter the site from D.A. Thomas Road, which will be upgraded to facilitate access to the project and future community use. BC Hydro will assume ownership and maintenance of D.A. Thomas Road. We have completed a pavement condition survey and will return Clarke Avenue to the same condition once work is finished. This could include re-paving, if needed.

Material for the berm will be transported from Portage Mountain via Canyon Drive. To improve safety, we have installed a mandatory paved brake check on Canyon Drive.

**Traffic management**

Safety is our highest priority. An important part of this is carefully managing the traffic and community impacts from our work.

For our shoreline protection work, the contractor will develop a safety plan that includes traffic management.

We have also developed a traffic management plan to focus on the movement of materials from West Pine Quarry to Hudson’s Hope and Highway 29. BC Hydro and the Ministry of Transportation and Infrastructure shared the plan with local municipalities to get feedback on concerns and priorities.

**What to expect**

- There will be truck traffic in the Hudson’s Hope area as equipment and materials are brought to site.
- There will be some noise, vibration and dust near construction activities.
- Where possible, we will take steps to reduce the effects of construction activities on local residents.
- When a contractor is selected for the shoreline protection project, they will confirm their schedule. Generally, we expect work to occur on day shift, seven days a week.
- There will be approximately 10–15 haul trucks on Canyon Drive per hour as a result of both Site C Highway 29 hauling and the shoreline protection project.
D. A. Thomas boat launch and day use area

As part of our community investment program in Hudson’s Hope, we are developing a new small craft boat launch and day use site at the bottom of D. A. Thomas Rd. The boat launch will consist of a gangway and floating dock. This will allow the launch of car topper–type boats such as kayaks and canoes at regular reservoir operation levels. Boats on trailers will still need to be launched at the new boat launch and day use area at Lynx Creek.

There will be no public access to D. A. Thomas Road and the shoreline during berm construction, from 2020 – 2023.

Your feedback

How would you like the day use area to be laid out for vegetation and picnic areas?
Due to the new reservoir, the Lynx Creek boat launch in Hudson’s Hope will be rebuilt and upgraded at a site to the east of its current location. This will include:

- A day use area with picnic site, interpretive kiosk and pit toilet
- Safe road access for vehicles with trailers
- A double-wide concrete boat ramp with a 10–15% grade
- Safe turnaround area for trailered, motorized boats longer than five metres
- Parking for vehicles with trailers

The new boat launch at Lynx Creek will open after the reservoir is filled in 2023. We aim to maintain access to the existing boat launch during the Highway 29 realignment work and prior to reservoir filling. We will maintain emergency access to the river for the RCMP at Peace Canyon Dam.
Although there will be some changes to the shoreline at Hudson’s Hope over the next few years, we will be maintaining and potentially improving walking opportunities for the community. After the shoreline protection berm has been built, the Portage Trail will be reconnected to D.A. Thomas Road. The trail will be accessible year-round for non-motorized use. Due to community input, pedestrian access west along the berm will be restricted.

**New trail:** The District and BC Hydro worked together to provide pedestrian access along the berm crest going east from the D.A. Thomas boat launch.
Lucas Subdivision

BC Hydro contributed $1.7 million towards the redevelopment of the Lucas (formerly Atkinson) Subdivision, which included improvements to roads as well as updates to water, sewer and electricity servicing. We worked with the District of Hudson’s Hope on the redevelopment of the subdivision and hired a local contractor to complete a large portion of the earthworks. We are now going through the phased sale and marketing strategy for the subdivision.

BC Hydro has purchased 10 of the Lucas subdivision lots from the District of Hudson’s Hope for $500,000. Nine of the lots will be used to help attract and retain skilled employees for existing BC Hydro operations.

Essential Services House Project

On the remaining lot in the Lucas Subdivision, BC Hydro and School District 60 are collaborating to build a house that will be used as an incentive for essential community service providers, such as pharmacists, doctors or nurses, to come to Hudson’s Hope. Students who were selected to work on the house construction received a full semester of high school elective credits, earned Level One carpentry certification and earned apprenticeship hours towards their Red Seal.

The $465,000, 1,375-square foot house features nine-foot ceilings, a custom maple kitchen, three bedrooms, two bathrooms, natural gas heat and hot water, a large deck and attached garage.

Water intake and pump house replacement

The District of Hudson’s Hope and BC Hydro worked together to determine the best option to replace the community’s water intake and pumphouse. After completing investigations, the District determined that there is sufficient water quantity and quality to replace the current system with a well system. The District presented this system to residents at a public meeting on Thursday, April 18, 2019. We will continue to work together to implement the new system.
Connecting the communities of Hudson’s Hope and Fort St. John, Highway 29 is a 70-kilometre stretch of road that winds along the north side of the Peace River. When the Site C reservoir is filled beginning in 2023, the reservoir will widen the Peace River by two to three times and inundate parts of this existing highway.

As a result, BC Hydro is working with the Ministry of Transportation and Infrastructure to realign affected sections of the highway. Construction is taking place from 2018 – 2023. The work involves moving parts of the highway north of the future reservoir. This includes constructing bridges, culverts, and berms.
Work will usually occur seven days a week, twelve hours a day. Drivers can expect some delays and periods of single lane alternating traffic. To ensure safety, please watch for traffic control personnel and signs that indicate active work areas.

### Current status

We have begun construction of the highway at Halfway River and Cache Creek West.

Construction on parts of Cache Creek East may begin in the fall of 2019. Design work is in its final phases for the other segments.

### Next steps and mitigation

Realigning Highway 29 requires clearing, road grading and paving, and bridge construction. All highway work is delivered to Ministry of Transportation and Infrastructure standards.

Safety is our top priority. All contractors will follow rigorous traffic management, safety and environmental plans.

Please visit DriveBC.com for more information on lane closures.

### Emergency vehicles will have priority access and experience minimal delays.

### Highway 29 construction schedule

---

Your feedback

What is the best way of providing you with traffic updates?
Funding for community benefits

The District of Hudson’s Hope and BC Hydro worked together to develop a community benefit agreement that would provide $3.7 million in programs and funding to the community:

- $2.7 million for the Lucas Subdivision. This includes $1.7 million for redeveloping and $500,000 for purchasing 10 lots in the subdivision. It also includes $500,000 for building and maintaining the demonstration home to attract key community services personnel.
- $268,000 for the District to develop an industrial park, support community development activities and fund recreation facilities and programs
- $20,000 for fire and road rescue programs services in the community
- $80,000 for the District to use towards community planning activities undertaken to reflect the changes occurring due to the Site C project
- $442,000 to the District for changes in land use, including $160,000 under Environmental Assessment Certificate Condition 50 and $282,000 in additional funding negotiated by the District.

The District also received $150,000 for enhancements to Alwin Holland Park and other community shoreline recreation areas, under Environmental Assessment Certificate Condition 40.
The Site C project includes an 83-kilometre reservoir from the Site C dam to Hudson’s Hope that will be about two to three times the width of the current river. While filling the reservoir is one of the last activities to take place, the reservoir area first needs to be cleared of trees and vegetation. Clearing is also taking place in the transmission line corridor.

Trees that are the right size, quality and volume to make them suitable for processing will be hauled to local mills. The remaining wood may be chipped, mulched, spread as coarse woody debris, or burned on site.

Logging trucks will use Highway 29 and resource roads to haul logs to local mills, while avoiding local streets where practical. Most work around Hudson’s Hope will involve clearing islands that are accessed from the south side of the Peace River. Some logging of valley slopes (possibly using helicopters) may be required in this area.

*All schedules are approximate and subject to change.*
